Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Itoh et al (US 4623222).

Itoh discloses a liquid crystal display (LCD) device comprising: a transparent front panel (91), a rear panel (3a) and a LC layer (6) sandwiched between the transparent front panel and the rear panel, the transparent front panel having a central area opposing areas of the LC layer and the rear panel and a peripheral area extending from the central area, the transparent front panel (inherently) acting as an overcoat for protecting said LC layer and the rear panel (inherently) against a reasonable external force.

Itoh discloses the peripheral area having holes for receiving screws (see Figure 1).

Itoh discloses the peripheral area including a pair of flange portions extending from the central area (see Figure 1).

Claim Rejections - 35 USC § 102

3. Claim 4 is rejected under 35 U.S.C. 102(b) as being anticipated by Kubo et al (US 4826297).

Kubo discloses a liquid crystal display (LCD) device comprising (see at least Figure 2): a transparent front panel (1), a rear panel (12) and a LC layer (11) sandwiched between the transparent front panel and the rear panel, the transparent front panel having a central area opposing areas of the LC layer and the rear panel and a peripheral area extending from the central area, the transparent front panel (inherently) acting as an overcoat for protecting said LC layer and the rear panel (inherently) against a reasonable external force.

Kubo discloses the central area having a thickness larger than a thickness of the peripheral area, whereby a step is formed in a vicinity of a boundary between the central area and the peripheral area (see at Figure 2).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kubo et al as applied to claim 4 above.

Art Unit: 2871

Kubo discloses the front panel comprising a portion having a thickness substantially equal to a thickness of the rear panel.

It would have at least obvious one of ordinary skill in the art to employ an additional layer for providing advantages such as extra protection for the substrate(s) and the liquid crystal layer so as defects such as dust can be minimized, extra resistance for the substrate.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
